

AMENDMENTS TO THE SPECIFICATION

Please amend paragraph 60, on page 13 of the specification as follows:

[60] At stage 425, the process checks to see if all integral equations are assigned. If not, processing returns to stage 440 where the current PIL rank is increased. If so, processing continues to stage 430 where each equation that is assigned an integral that appears linearly may be solved. The solved value is then substituted into other equations. If due to substitutions, an assigned variable is no longer in the equation, another integral, with minimum integration rank, is assigned to it. At stage 435, the assigned or solved integral variables are eliminated.
